UI/UX CASE STUDY

2025
Himani & Lakshay

Problem Statement

PNB's banking website is difficult to navigate, with complex menus and a cluttered homepage that frustrate users trying to complete tasks like fund transfers, bill payments, and account management. The lack of personalization and outdated design further complicates the user experience, especially for mobile users. These issues lead to inefficiency, user frustration, and a negative impact on customer retention.

This case study seeks to improve the website's usability by addressing navigation, information overload, and visual design, ultimately enhancing the overall user experience.

Lack of clear navigation paths hinder users from quickly finding the services they need.

The homepage is cluttered with excessive information, making it difficult for users to focus on their primary goals.

The site fails to provide users with personalized content or dashboard views, which could help them quickly access their most used services.

The website's design and typography are outdated, affecting readability and overall aesthetics.

Designing Process

DISCOVERY

- Primary & Secondary Research

In this step, we conducted Primary Research and secondary Research to understand the User perspective on PNB current website. What are the key challenges faced by them by conducting surveys and interviews , allowing us ti identify key problem statements and articulate the challenges faced by users.

STEP 01

IDEATION

- HMW & Solutions

In this step, we defined solutions that provided an overarching overview, emphasizing improvements in two specific user flows: the visibility of important features and the Redesign UI with consistent and softer color palettes, utilizing the How Might We (HMW) method. This targeted approach aims to enhance usability and user experience within these key interactions.

STEP 02

IMPLEMENTATION

- Wireframe & UI

In this step, we established the visual direction and utilized this guide to create wireframes and user interfaces that align with the design system. This approach culminated in the development of a functional prototype, ensuring a cohesive and user-centered design that effectively addresses the identified challenges.

STEP 03

Typography

Outfit

Classic and Geometric

Outfit is a variable font family carefully crafted & designed for computer screens.

Technology

Challenges

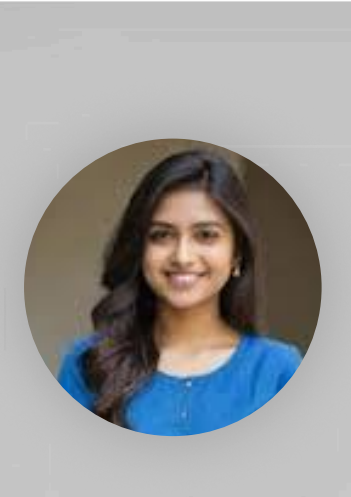
- Unclear icons and too many options on homepage.
- Difficult to find frequently used services.
- Small text and cluttered design confuse him.
- Often needs help from family to complete tasks.

Ramesh Verma
Age: 56 | Married
Small Business Owner | Patiala, Punjab

As a small business owner who isn't tech-savvy, I want to manage my banking quickly and without confusion, so I can focus on my business instead of struggling with the site

Goals

- Easily access balance and transaction history
- Make fund transfers without external help
- Understand icons and menu options clearly
- Navigate without clicking wrong buttons
- Feel confident in using the bank's website on his own



Aditi Mehra
Age: 20 | Single
Undergraduate Student | Delhi, India

As a student who's always on the go, I want to do quick transactions on my mobile without glitches, so I can save time and avoid frustration.

Goals

- Perform fast UPI transfers
- View mini statements and balances quickly
- Use mobile site without needing zoom
- Complete tasks in 2–3 taps
- Feel modern, efficient digital experience
